CardioCore

Know Your Normal

Personalized cardiovascular monitoring.

Monitoring support — not a diagnostic device

moda.app

CardioCore

Your Personal Cardiovascular Companion

CardioCore learns what normal looks like for you, then tells you — calmly — when something meaningfully changes.

Continuous monitoring
ECG, HR, HRV, SpO_2 and temperature

Personal baseline
Compared against your own normal

Digital Twin
A personalized model of your patterns

Doctor connectivity
Share data and book appointments

CardioCore supports clinical care. It does not diagnose conditions or replace a healthcare professional.

Get Started

I already have an account

moda.app

How CardioCore works

Seven signals, one personal model.

1. **Wearable senses**
   ECG · HR · HRV · SpO_2 · temp · motion
2. **App receives over BLE**
   Streamed live, stored securely
3. **Digital Twin learns you**
   Your baseline, not a population average
4. **Insights & doctor care**
   Explainable changes, clinical follow-up

Your data stays yours. Nothing is shared with a provider without your explicit consent.

48 ms

7% below your personal average of 52 ms

LAST 7 DAYS

AVERAGE	BASELINE	DEVIATION
50 ms	**52 ms**	**−7%**
7-day	personal	3 days

WHY THIS CHANGED

HRV has sat below your usual range for three nights, alongside slightly shorter sleep and a marginally raised resting heart rate. Signal quality was good throughout, so the change is likely real rather than an artefact.

WHAT YOU CAN DO

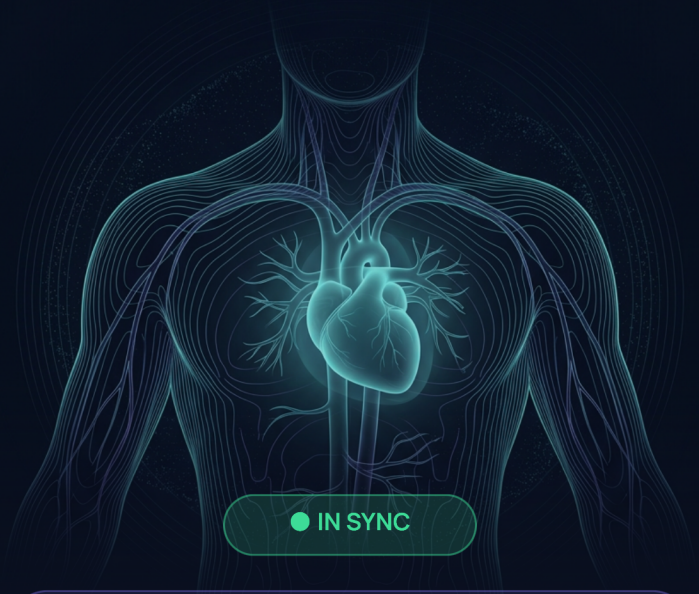

Prioritise sleep and light activity for a few days. If the pattern persists beyond a week, consider raising it at your next review.

moda.app

9:41

My Digital Twin

Your personalized cardiovascular model.

WHAT YOUR TWIN DOES

It learns your normal physiological patterns and compares your current state against your personal baseline.

moda.app

9:41

Twin insights

Model | Drivers | History

MODEL CONFIDENCE

High 42 days of valid data

WHAT HAPPENED

HRV drifted below your usual band

For three consecutive nights your HRV sat 5–9% under your 30-day baseline.

WHY IT MATTERS

Sustained HRV reduction often tracks with recovery load, sleep debt or illness onset.

CONTEXT

Resting HR is up 2 bpm, SpO_2 and temperature are unchanged, and activity has been normal.

WHAT TO DO NEXT

Protect sleep for a few nights. Keep wearing the device so the twin can confirm recovery.

This is a pattern observation, not a diagnosis. A clinician should interpret anything that concerns you.

9:41

Insights

Daily | Weekly | Alerts

ATTENTION · TODAY 08:02

HRV below your usual range

WHAT HAPPENED

Below your usual range for 24 hours.

WHY IT MATTERS

Often recovery load, not a cardiac event.

WHAT TO DO NEXT

Protect sleep and keep wearing the device.

INFORMATIONAL · TODAY 07:15

Resting heart rate held steady

Your resting heart rate remained close to your personal baseline overnight.

CONTEXT · YESTERDAY 18:40

Elevated heart rate during activity

HR rose to 138 bpm while motion also increased. This pattern is expected during exercise.

Insights describe patterns in your own data. They are not diagnoses and do not replace clinical assessment.
